SUMMARY

Senior technical leader specializing in devops / sre / mlops with expertise in Rust, Bash, Pulumi. Proven success in technical vision, team development, and stakeholder management.

WORK EXPERIENCE

SRE

2025-06 — Present

Cloudflare (part-time)

Built automated backup solution using Linkerd, ensuring 5000% data protection
Implemented container orchestration using Linkerd, managing 100000+ containers
Implemented log aggregation using Linkerd, processing 100000+ logs/day
Implemented security scanning using Thanos, identifying 10000+ vulnerabilities

Platform Engineer

2021-05 — 2025-01

PipelineIO (full-time)

Built automated backup solution using Kale, ensuring 50000% data protection
Established GitOps workflows using Alibaba Cloud, improving deployment frequency by 36%
Established GitOps workflows using Alibaba Cloud, improving deployment frequency by 19%

Cloud Engineer

2016-08 — 2021-02

CloudNova (contract)

Optimized cloud infrastructure using HCL, reducing costs by 62%
Created monitoring and alerting system using HCL, reducing MTTR by 59%

EDUCATION

B.Eng. in Electrical Engineering

2017

Carnegie Mellon University — GPA: 3.68

SKILLS

Rust, Bash, Pulumi, CDK, Podman, Buildah, Linkerd, Envoy, Istio, Argo Workflows, GitLab CI, Opsgenie, Datadog, ELK Stack, Prometheus, Alibaba Cloud, Linode, Azure, AWS, Oracle Cloud, Triton Inference Server, MLflow, Kale, TorchServe, Kubeflow, Infrastructure as Code, MLOps, Chaos Engineering, SRE Practices

PROJECTS

Real-time Analytics Engine *(Rust, Bash, Istio)*

Designed and implemented CI/CD Pipeline with Rust, integrating with Istio for seamless data flow

Deployment Dashboard *(Rust, Bash, Kale)*

Built Observability Dashboard with Rust and Kale, serving 10,000+ daily active users

Token Bucket Limiter *(Rust, Bash, Linkerd)*

Developed Observability Dashboard using Linkerd, reducing processing time by 60% through algorithmic improvements

ADDITIONAL

Personal_statement: Passionate about open source and building technology that makes a difference.
