

# Willie Perez

Cybersecurity | Fresher | Deborahchester, Japan

willie.perez@gmail.com | +1-778-276-5530x07309 | <https://linkedin.com/in/willie-perez>

## About Me

---

Distinguished technologist with 14 years shaping cybersecurity practice. Deep expertise in Rust, Go, PowerShell and proven ability to influence C-level decisions.

## Education

---

### B.A. in Data Science

2012

Tsinghua University — GPA: 3.31

*Cyber Defense Club*

## Projects

---

### Health Check Service (2023)

Built Encryption Utility using PowerShell and Metasploit, enabling automated processing and improving efficiency by 40%

Tech: Metasploit, PowerShell, Rust

### Vector Search API (2020)

Designed and implemented Incident Response Platform with Go, integrating with Metasploit for seamless data flow

Tech: Go, C, Metasploit

### Task Scheduler (2022)

Designed and implemented Vulnerability Scanner with Rust, integrating with PowerShell for seamless data flow

Tech: Metasploit, PowerShell, Rust

## Skills

---

Rust Go PowerShell C Snort Sigma Metasploit Trivy Nessus Wireshark CrowdStrike  
SonarQube Redis Elasticsearch AWS Security Hub Azure Sentinel GCP Security Command Center  
SOC2 Compliance Threat Modeling Incident Response Zero Trust Architecture

## Internships / Experience

---

### Security Architect at Snowflake (2023-08 – Present)

Built secure CI/CD pipeline using CrowdStrike, preventing 100000+ security issues

Built secure CI/CD pipeline using PowerShell, preventing 500+ security issues

### SOC Analyst at ParseLab (2019-05 – 2023-08)

Implemented security monitoring using Burp Suite, detecting 10000+ threats

Developed threat intelligence platform using Go, tracking 100000+ threats

Built incident response automation using Snort, reducing recovery time by 58%

Developed threat intelligence platform using Go, tracking 10000+ threats

**SOC Analyst at Cloudflare (2014-12 – 2018-12)**

Implemented identity management using Elasticsearch, securing 100+ user identities

Designed zero-trust architecture using Zero Trust Architecture, securing 5000+ endpoints

Built incident response automation using Rust, reducing recovery time by 31%

Built security automation using Zero Trust Architecture, reducing incident response time by 21%

**Penetration Tester at Quantum Edge (2011-07 – 2014-06)**

Designed zero-trust architecture using OWASP ZAP, securing 5000+ endpoints

Implemented encryption solution using React, protecting 1000+ records

**Certifications**

---

AWS Certified Security Specialty — Amazon Web Services
